

### Activity 1:

X must have method bar that returns something that is able to be multiplied. (has a `__mul__`?)

Type of Y must be a parameter to x.bar

### Activity 2:

```
def make_list(items):  
    l = []  
    for i in items:  
        l.append(i)  
    return l
```
